Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION***Election/Restrictions***

Applicant's election of Group II and Species 1 and 3 (figures 1A and 3A) in Paper No. 5 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 1-30 and 40-53 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention/species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 32 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Given the many embodiments including that shown in figure 3D, the terminology "basket-shaped spring valve" is ambiguous. Also, because the prior is similar in configuration, one having ordinary skill in the art does not know the intended boundaries of this limitation, therefore, this claim is ambiguous.

Claim Rejections - 35 USC § 102

Art Unit: 3738

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 31-39 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Greenhalgh (6,494,909).

Greenhalgh teaches a valved stent comprising a tubular body formed of braided wires 16 and 44; and a normally closed valve (see column 2, lines 1-5) formed from said braided wires extending from an end of tubular body; covering 30. Note that the term "wire" does not infer a metal material, although, element 44 is metal.

Regarding claim 39, the wires are curled and are directed inwards towards a longitudinal center axis of the tubular body.

Claims 31-39 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Brice (FR 2788217).

Brice teaches a valved stent comprising a tubular body formed of braided wires 21 and a normally closed valve 3 formed from said braided wires extending from an end of stent tubular body; covering 30.

Regarding claim 32, with the valve in a closed position and when view from the interior of the tubular body, the valve is "basket-shaped".

Regarding claim 39, the wires 33 are curled and are directed inwards towards a longitudinal center axis of the tubular body.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note all figures of DiMatteo et al including figure 28A.
